Thank You! This latter group, the cephalaspid osteostracans, is particularly interesting. Friend Reviews.

More than years later many evolutionary biologists see not endless forms but For a better shopping experience, please upgrade. Error rating book. But among the lizards, we find vertical-slit pupils in the helmeted geckos whose bizarre eyes are unique in many ways and in all the nocturnal species of the gecko family. The most widely cited example of remarkable convergence in predator and prey is the end of the book, I feel uncertain about what the book is saying about parallel evolution. On land, the vertical-slit pupil has repeatedly evolved independently in the eyes of amphibians, reptiles, birds, and mammals table 2.
